

SLINGBAG®

PROJECT > BCC Golf Course Erosion Control

SlingBag® 60 lb Revetment (Sand-Cement) Burlap Bags
Thibodaux, LA

PROJECT DESCRIPTION:

The Problem: Drainage culverts at the golf course on hole #4 had erosion issues due to rain runoff over the years.

The Solution: Bayou Country Club “BCC” chose to use the contents of SlingBag® Concrete Revetment (DOTD QPL48) as a permanent solution to the erosion. First the BCC maintenance crew removed the grass and built up soil was excavated. Revetment Burlap Bags were then placed in an overlapping pattern to create a solid Revetment mat system.

The Revetment material content in this SlingBag® application is a high strength, 4000 PSI sand-cement blend, will bond together and require no punching holes in the bags for reinforcement. The sand cement blend is formulated

to harden in or out of water after initial placement. It is harmless to wildlife and as the bags degrade, there is the appearance of nature stone. The SlingBag® patented system is designed to efficiently and safely store, move and place the bags 5 times faster and safer than conventional methods – **EVERY TIME!**

The grass & soil were removed, reinforcement was used to hold the starter bags and then the remaining bags placed.

SlingBag® contains 56 each 60 lb Burlap Bags Revetment (Sand-Cement), 3-1 or Pure Sand, as required.

SUB-CONTRACTOR:

Bayou Country Club Maintenance

MANUFACTURING LOCATION:

Picayune, MS “HSA” location

SlingBag® PRODUCTS USED:

- 2 SlingBag® (No. NR83994)
- 60 lb Sand-Cement (112 bags)

PROJECT START: July 2017

COMPLETION DATE: July 2017
